# Your Project Title Here

First Author Name [Point of Contact], University of Edinburgh, email@example.com
Second Author name, University of Edinburgh, email@example.com
…

## Abstract

Write your abstract here (maximum of 150 words). Summarise the problem/opportunity, your proposed GenAI solution, and the expected impact. Keep it concise.

## 1. Introduction / Problem Statement

Introduce the problem, gap, or opportunity you have identified in university studies. Why is it important? Who is affected?

Example use cases you may consider:
- Automating feedback for student assignments
- Assisting with study planning or revision
- Providing personalised practice exercises
- Streamlining administrative or support processes

## 2. Proposed Solution

Describe your idea for a GenAI assistant/tool/process. Explain:
a) The process it supports
b) The technology you propose (at a conceptual level)
c) Links to any optional prototype, demo, code, or video presentation you wish to share.

## 3. Implications & Ethical Considerations

Discuss the broader effects beyond the intended use case. Consider:
- How this might fit into the wider educational system
- Benefits, risks, and ethical concerns (bias, misuse, fairness, transparency)
- Possible unintended consequences or broader implications of adoption.
